Linear Regression

The goal of linear regression

Linear regression without ML

$$a = \frac{\sum_{i=1}^n (x_i - \bar{x}) * (y_i - \bar{y})}{\sum_{i=1}^n (x_i - \bar{x})^2}$$

$$b = \bar{y} - a\bar{x}$$

Linear regression without ML

$$a = \frac{\sum_{i=1}^n (x_i - \bar{x}) * (y_i - \bar{y})}{\sum_{i=1}^n (x_i - \bar{x})^2}$$

$$b = \bar{y} - a\bar{x}$$

Linear regression with ML

Machine Learning intuitions

Machine Learning is not a silver bullet 🖱️

ML is just another tool in the toolbox 🛠️

5 intuitions

1. MLaaS vs Open Source
2. Image recognition of complex objects
3. Vulnerabilities
4. Imbalanced datasets
5. Human bias

1) MLaaS vs Open Source

MLaaS vs Open Source

Machine Learning as a Service (MLaaS)

- Out-of-the-box solutions
- Pay per usage

Google Cloud Platform

IBM Watson

MLaaS vs Open Source

Machine Learning as a Service (MLaaS)

- Out-of-the-box solutions
- Pay per usage

Google Cloud Platform

Open Source

- Custom models for your use case
- Requires the necessary skills

Experiment with the whole scale

Not Hotdog

● Hotdog

● Not Hotdog

A person's hands are shown interacting with a tablet. The right hand holds a white stylus, pointing at the screen. The left hand, wearing a black wristwatch, is positioned near the bottom left corner of the tablet. The tablet screen displays a bar chart with several vertical bars of varying heights. The background is a light-colored surface, and the overall image has a dark, semi-transparent overlay.

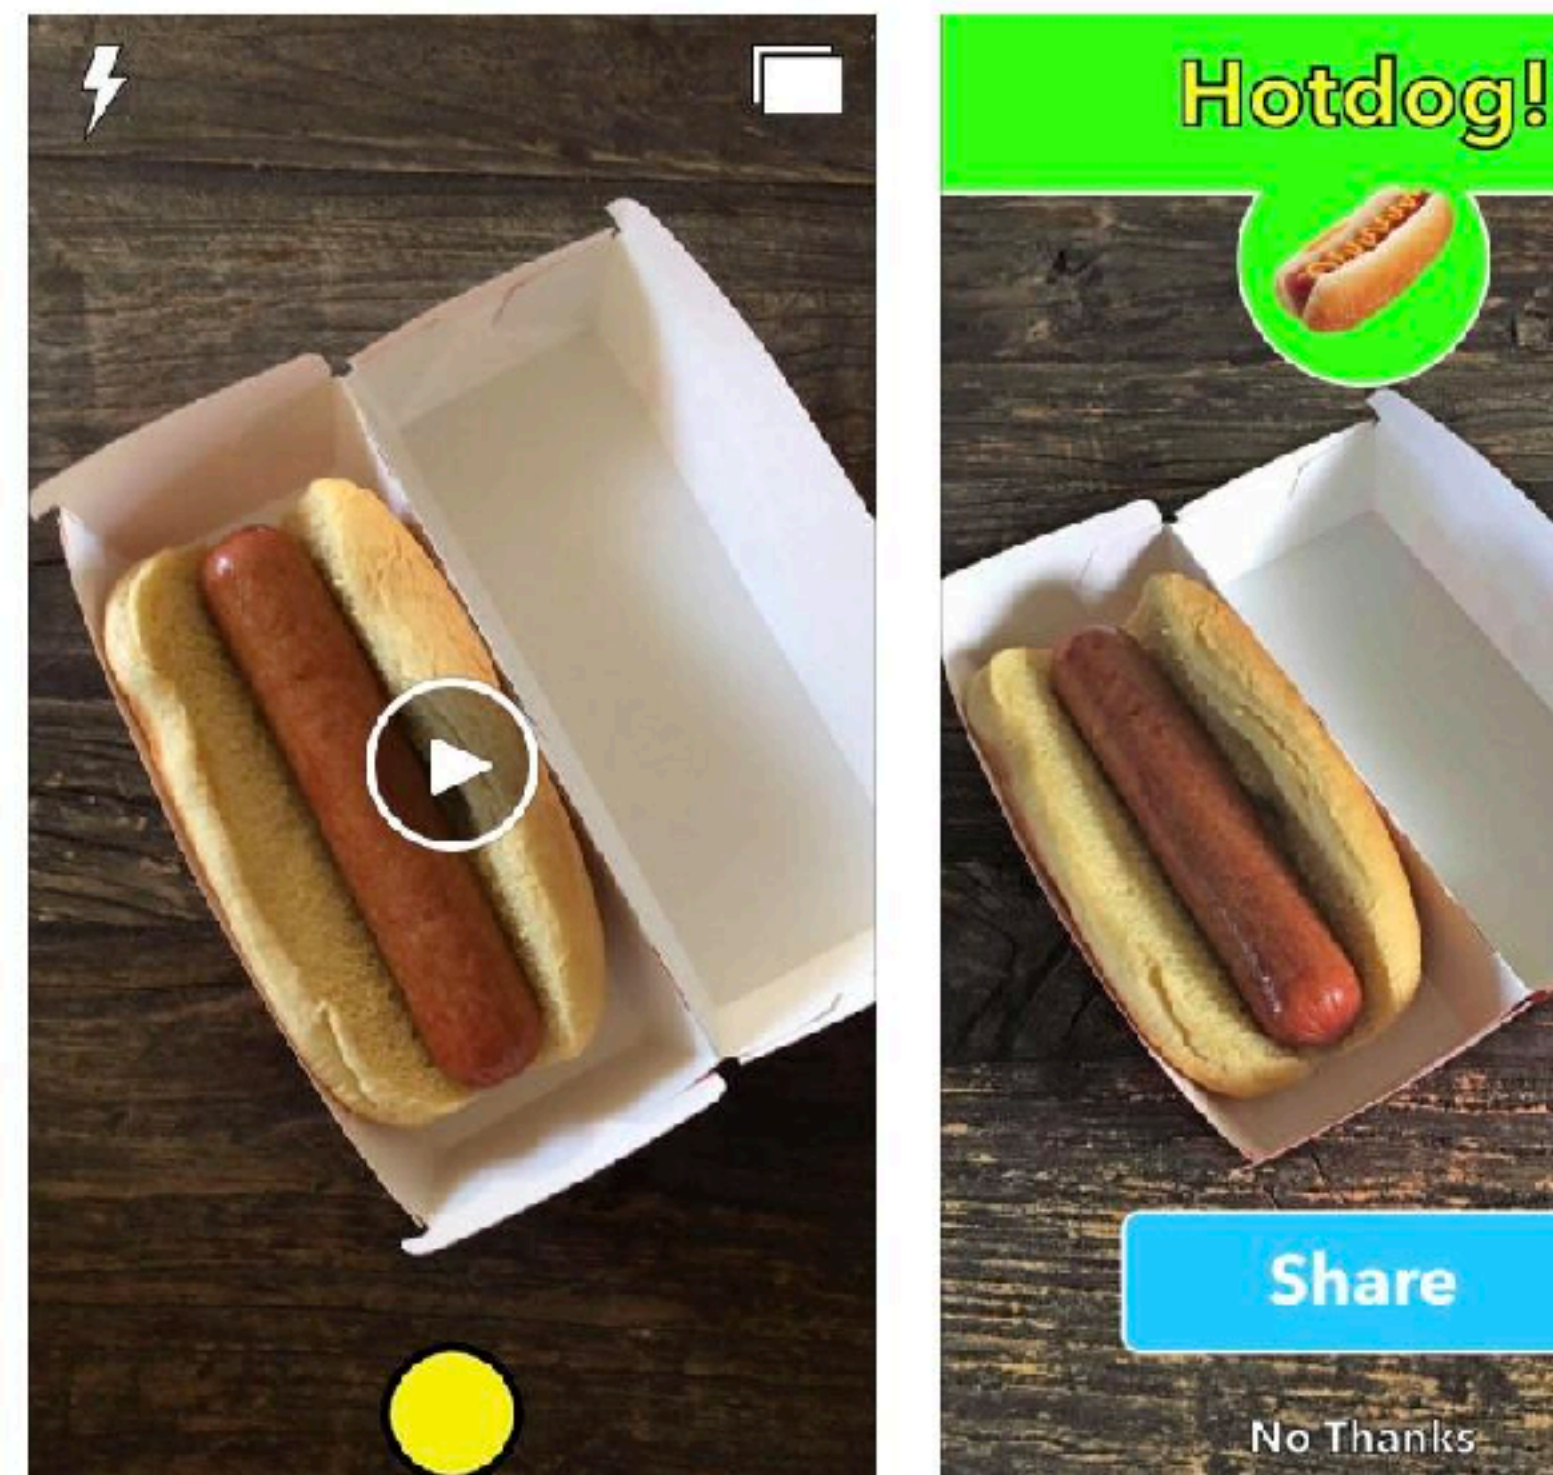

5) Human bias

Key-takeaways

Key-takeaways

1. Use MLaaS to get quick wins. Switch to Open Source when necessary
2. If a human can classify an image, then an ML model can as well
3. Be careful of introducing your own biases in your data
